

# Paperwork isn't working.

Where health and safety is concerned, it's the doing that counts.

## MOBILE APP - FEATURES

### Site review

Site reviews are an essential part of site safety culture. Use your phone camera and the app to record the great safety actions you take on site every day - simple!

### Vehicle check

For tradies, reliable work vans and utes are fundamental. Record and monitor the health of your vehicle so you've got reliable wheels to get you and your workers to the job safely. Mobile plant on site? Use this feature to keep your excavators and scissor lifts in check too!

### Risk assessment

Not sure if it looks safe? Our step by step risk assessment puts the best practice guides for critical risks in the hands of those who can control them. Heights, dust, excavations, this tool covers them all.

### Toolbox meeting

Proving you regularly meet and discuss risks onsite is required for effective site safety (and to set a time for the next team beer and BBQ sesh!). Take a selfie of the team, enter in what you discussed, and the meeting record is captured forever as proof of just how safe you are!

### Report an accident

Even with sound health and safety - accidents still happen. The app lets you report an accident or near miss and sends an alert direct to our advisory team. What's more, they will then step you through your responsibilities and provide help and support, when you need it most.

### My reports

Long gone are the days of mountains of paperwork. Complete everything you need to on the app, have it stored safely and securely in one place, available for you to download and view the reports when you need them.
